### Key Issues for management

- Short turn around (= good investment)
- Correct handling of auditing procedures
- Correct payment of compensations
- Correct documentation toward Inland Revenue

### Key Issues for Sales

- More time available for sales
- Easier control procedures
- Travelling accounts are on time
- Uniform registration and reporting
- Less stress for employees when their driver's logs are due
- Compensations are paid on time

### Key Issues for the IT Dept.

- Easy installation of program
- May be individually installed or deployed in packages
- Observes all current standards and is based on Microsoft terminologies  
Easily integrated into most economy systems such as Microsoft Dynamics NAV or SAP

# No More Hand Written Driver's log!

## Get a 100 % automatic view of all miles driven

### The driver's log problem.

Most businesses need some form of registration of their business travel, either as a driver's log or as a record of the time spent with a customer by the employee.

### Typical problems solved by Autolog:

- Have the employees received too much in terms of compensation?
- Is the documentation in compliance with the demands of Inland Revenue?
- How do you document the hours spent with a customer?
- Is too much time is spent entering travelling data manually into your accounting system?
- How much time is spent checking the compensations?

Autolog will solve these issues **Automatically**. To boot, the system is easy to use, reliable, and respects the integrity of your employees as the system basically cannot be used for surveillance.

The complete procedure from the registration of driving to settling of accounts both with the customer as with the employee is automated.

The **Autolog Driver's log** is the only fully automated driver's log on the market which complies fully with the requirements as to documentation by the Inland Revenue.

### The system automatically records:

- The routes driven by means of the GPS-datalogger.
- Where did the route go?
- How many miles were driven?
- The distinction between business and private driving.
- Synchronization with the mileage counter.

Time spent travelling and time spent with customers.
